### **PULSA Series and PULSAR Standard Paint System**

Pulsafeeder's standard protective coating for PULSA Series and PULSAR pumps is a base coat of Devran 201 epoxy primer under a top coat of Devran 224HS two-part high build epoxy coating, both of which are manufactured by Devoe High Performance Coatings. Devran 224HS was selected because of its superior resistance to ultraviolet (UV) rays, resistance to typical industrial atmospheric corrosion, and acceptable VOC emissions ratings. Because this is a solvent-based paint, a specially equipped drying room captures the VOCs.

For an additional charge, Pulsafeeder also offers Devthane 379UVA aliphatic urethane gloss enamel for those customers who prefer a glossy urethane coating to a semi-gloss epoxy coating.

Pulsafeeder will supply other coating systems as required by customer specifications. Please contact your Application Engineer for pricing and lead times.
