

Thanks for visiting Pulsafeeder last week at OTC in Houston. It was a tremendous week for the Pulsafeeder team, and we were truly impressed with quality and quantity of visitors that came into our booth.

Pulsafeeder's technology is gaining significant momentum in oil & gas markets, as our pumps are used by numerous upstream producers to deliver precise volumes of flow assurance chemicals and scale & corrosion inhibitors. As we discussed last week, our API 675 pumps are used for water treatment applications in these environments, and they're also used throughout refineries and petrochemical plants.

Many of the use cases we discussed in the booth last week are profiled in further detail in the following stories:

- [Pumps & Systems: May 1, 2019: Occidental/Chevron in Potential Bidding War for Anadarko](#)
- [Pumps & Systems: April 2019: Metering Pumps for Enhanced Oil Recovery](#)
- [Pump Engineer: Fall 2018: a basic Primer on Pulsafeeder's Pumps](#)

If you need any additional information on Pulsafeeder pumps – please respond, and we'll answer your questions immediately.

Once again, it was a pleasure meeting you at OTC last week, and we look forward to keeping in touch.

Sincerely,
Gary DeWolf
